Photo Enhancer Prompt for Google Gemini

Restore and enhance the old album photograph while strictly preserving the subject's identity, accurate facial geometry, and original expression. Do not alter face shape, proportions, pose, or emotional expression. The person must remain unmistakably the same individual.

Perform professional photo restoration only: repair fading, discoloration, scratches, dust, creases, film damage, and age-related noise. Recover lost details naturally without oversmoothing. Maintain real skin texture, natural hair detail, and authentic fabric texture.

Keep the exact same background from the original image. No replacements, no changes, no additions, no removals, and no layout shifts. The environment must remain identical and untouched.

Recreate the image as if it were professionally re-photographed using a Sony A1 full-frame camera with an 85mm f1.4 lens, shot at f1.6, ISO 100, 1/200 shutter speed, with cinematic shallow depth of field, perfect facial focus, and an editorial-neutral color profile. This Sony A1 + 85mm f1.4 setup is mandatory, and the final image must clearly reflect premium full-frame Sony A1 quality.

Match the original lighting direction, angle, and mood exactly. Subtly upgrade the lighting into a cinematic, subject-focused style with soft directional light, warm highlights, cool shadows, deeper contrast, expanded dynamic range, smooth tonal transitions, and micro-contrast enhancement. No harsh or artificial lighting.

Maintain neutral premium color tones, a cinematic contrast curve, natural saturation, real skin texture (not plastic), subtle film grain consistent with archival restoration, and zero artificial glow.

Render in 4K resolution, 10-bit color, cinematic editorial style, premium clarity, and preserved portrait framing. Improve realism, depth, texture, and clarity while keeping identity, pose, expression, background, and original nostalgic atmosphere fully preserved.

NEGATIVE PROMPT:
No new background, no background changes, no dramatic lighting, no face morphing, no beautification, no fake glow, no flat lighting, no oversmoothing, no pose changes, no framing changes.
